UMR3348 - Intégrité du génome, ARN et cancer

2. Post-Doctoral Researchers

We are currently seeking two post-docs to work on the following topics: - Regulation of intronic polyadenylation in response/ resistance to genotoxic agents. - Translation regulation in drug-resistant cancer cells. Candidates must hold a PhD and have expertise in molecular biology. Expertise in RNA biology is also desired. Interested candidates are encouraged to contact us by email, including their CV and 2 letters of recommendation. Salary is available for 1 year but successful candidates will have to apply for their own postdoctoral fellowship.
